The European Society for Photodynamic Therapy

The purpose of the founding of the European Society for Photodynamic Therapy in Dermatology (EURO-PDT) was to create a communication platform for researchers and clinicians working with fluorescence diagnosis and photodynamic therapy and to promote international cooperation in this field in Europe.

We hope that it will serve to shorten the communication lines and time between research results and clinical application and promote cross fertilization between PDT specialists in Europe.

The annual congresses serve to fulfil our intentions by having presentations of advances in research and clinical application and progress and thereby informing researchers and clinicians from all over Europe of the latest developments in the field.

We hope that you will join our congress and that you will return to your work after the congress with new knowledge which will help your patients.

Lasse R. Braathen MD.PhD.MHA
President of EURO-PDT

COPEN

h a g e N

Topics of discussion

Plenary Session I - NMSC

Practical ways to improve efficacy & tolerability of PDT

Plenary Session II - NMSC

Other aspects of PDT for NMSC

Plenary Session III - NMSC

PDT in transplant recipients and immunosuppressed patients

Plenary Session IV - NMSC

Daylight-PDT

Plenary Session V - Acne

Plenary Session VI

Other indications

Plenary Session VII

Short oral presentations of posters
